An independent manufacturer
The benefit of a specialist

3,500 m²
of test platforms

One of the leading independent power testing labs in Europe

65,000
on-site interventions per year

Nearly 400 experts in commissioning, technical audit, consultancy and maintenance

10 %
of turnover invested in R&D

Always at the cutting-edge of technology for innovative, high-quality products

Since its foundation more than 90 years ago, SOCOMEC continues to design and manufacture its core products in Europe. Notably solutions for its primary mission: the availability, control and safety of low voltage electrical networks.

As an independent manufacturer, the Group is committed to constant innovation to improve the energy performance of electrical installations in infrastructures as well as industrial and commercial sites.

Throughout its history, SOCOMEC has constantly anticipated market changes by developing cutting-edge technologies, providing solutions that are adapted to customer requirements and fully in keeping with international standards.

“Optimising the performance of your system throughout its life cycle” - this is the commitment carried out every day by the SOCOMEC teams around the world, wherever your business is located.
Your energy, our expertise

**Critical Power**
*Ensuring the availability and storage of high quality power*

With its wide range of continuously evolving products, solutions and services, Socomec are recognised experts in the cutting-edge technologies used for ensuring the highest availability of the electrical power supply to critical facilities and buildings, including:

- static uninterruptible power supplies (UPS) for high-quality power free of distortions and interruptions occurring on the primary power supply,
- changeover of static, high availability sources for transferring the supply to an operational back-up source,
- permanent monitoring of the electrical facilities to prevent failures and reduce operating losses,
- energy storage for ensuring the proper energy mix of buildings and for stabilisation of the power grid.

**Power Control & Safety**
*Managing power and protecting persons and facilities*

Active in the industrial switching market since its foundation in 1922, Socomec is today an undisputed leader in the field of low voltage switchgear, providing expert solutions that ensure:

- isolation and on load breaking for the most demanding switching applications,
- continuity of the power supply to electrical facilities via manual remotely operated or automatic transfer switching equipment,
- protection of persons and assets via fuse-based and other specialist solutions.

**Energy Efficiency**
*Managing the energy performance of buildings*

Socomec solutions, from current sensors through to a wide choice of innovative scalable software packages are driven by experts in energy performance. They meet the critical requirements of facility managers and operators of commercial, industrial and local authority buildings for:

- measuring energy consumption, identifying sources of excess consumption and raising the awareness of occupants about their impact,
- limiting reactive energy and avoiding the associated tariff penalties,
- using the best available tariffs, checking utility bills and accurately distributing energy billing among consumer entities,
- monitoring and detecting insulation faults.

**Expert Services**
*Enabling available, safe and efficient energy*

Socomec is committed to delivering a wide range of value-added services to ensure the reliability and optimisation of end-users’ equipment:

- prevention and service operations to lower the risks and enhance the efficiency of operations,
- measurement and analysis of a wide range of electrical parameters leading to recommendations for improving the site’s power quality,
- optimisation of the total cost of ownership and support for a safe transition when migrating from an old to a new generation of equipment,
- consultancy, deployment and training from the project engineering stage through to final procurement,
- performance assessment of the electrical installation throughout the life cycle of the products via analysis of data transmitted by connected devices.
Maintenance and professional services
50 years manufacturer experience of Critical Power care

Our expertise is dedicated to optimising the performance of your low voltage equipment during its life cycle.

The expertise of a single design, manufacture and maintenance supplier

Since 1968, Socomec has been developing products and services which are geared towards the quality and continuity of your high quality energy.

Specialists at your service

Our Services team comprises qualified engineers whose mission is to guarantee the correct operation of your UPS system(s).

We offer a comprehensive support service package which gives you complete peace of mind: commissioning, on-site testing, certified preventive maintenance visits, 24-hour call out and rapid on-site repairs, genuine (original) spare parts, power quality and energy efficiency audits, consultancy, design and implementation of installation modifications and updates, etc.

Our Services team is the most reliable partner to advise you on the maintenance of Socomec equipment and to resolve any problems in accordance with current environmental standards and procedures.

The availability of original spare parts

The various original parts and components that we stock guarantee that any faulty equipment can be rapidly brought back online, whilst maintaining its original performance and reliability.

Respect for the environment

As a manufacturer, we are committed to protecting the environment and actively participate in the development of legislation and standards related to this issue.

This guarantees that we will always respond to the demands of legislation concerning the disposal of used components and respect recycling procedures.
Key figures

Nearly 400 Socomec experts supported by 200 engineers and technicians from our distributors, drive the solutions to your specific needs.

Our global presence includes:
• 10 branches in France,
• 12 European subsidiaries,
• 8 Asian subsidiaries,
• representatives in 70+ countries.

On-site service management
• 65,000 service operations per year (mainly preventive visits).

Technical hotline network
• 20+ languages spoken.
• 3 advanced technical support centres.
• 100,000+ incoming calls handled per year.

Certified expertise
• 5,000 hours of technical training deployed per year (product, methodology and safety).
Preventive maintenance
Improving reliability and durability of your Critical Power equipment

The service life of the UPS depends on various factors such as load specifications (percentage, linearity and variability) and the operating environment (temperature, humidity, level of pollution).

To keep the UPS running at maximum levels of efficiency and to avoid system downtime with possible risks and damage to loads, it is important to have the manufacturer’s expertise to perform regular preventive maintenance.

This is the best way to ensure the reliability of your equipment over time and the most cost-effective solution to keep the Total Cost of Ownership under control.

Key points
- Inspections: mechanical, electrical, battery
- Dust removal/equipment cleaning
- Software updates
- Electronics testing
- Environmental checks
- Battery check
- Maintenance report

Benefits
- Helps reduce equipment malfunction
- Optimises operating efficiency
- Extends equipment lifetime
- Improves system availability
Emergency service 24/7
Guaranteed response to all unforeseen events

The response time is vital for business continuity and to limit as much as possible any downtime in case of a severe system anomaly.

It is therefore essential to have the expertise of a maintenance supplier who fully understands your equipment and knows your working environment and who can respond to emergencies within a time guaranteed by a bespoke Service Level Agreement (SLA).

Proximity and emergency service carried out by the manufacturer are the best guarantees for fast troubleshooting and real problem solving.

Key points

- Specialist team of engineers on call 24/7
- Technical expertise on-site within 4 hours* guaranteed
- Remote monitoring and proactive troubleshooting
- Corrective maintenance with original spare parts
- 24/7 spare part stock availability with high priority shipment

* Please check the service coverage in your area.

Benefits

- Quality technical support
- Fast and precise diagnostic
- Real problem solving
Maintenance service packages
A broad range of solutions to suit all your needs

The Maintenance service packages which combine the advantages of preventive maintenance and emergency service are entirely tailored around customers’ needs, taking into account individual operating constraints, business activity and the unique level of criticality associated with specific applications.

A variety of packages suitable for users of UPS Standard, UPS modular, UPS in data centres and transfer switches has been developed to cover all needs: from a simple combined service, to a fully-inclusive package that includes the cost of labour and spare parts and delivers the quickest response time to site.

Upgrade your service during warranty

Critical applications may require, from the real beginning, special maintenance and committed Service Level Agreement not included in Standard Warranty.

Get advantage while subscribing our EARLY CONTRACT UPTAKE formula during warranty period:
- preventive maintenance visit,
- priority hot-line,
- response time on site commitment,
- special discount applied right away compare to a standard contract,
- same discount applied on all following renewals,
- fixed price guaranteed over the period, in case of multiyear contract.
Silver, Gold, Platinum and Platinum+ are the Maintenance service packages suitable for standard UPS. 50 years of manufacturer’s experience is at your disposal to provide you with a comprehensive support package which affords you complete peace of mind.

Catalogue 2018

11
IT and facility managers, having chosen a modular UPS system to protect their critical applications, are looking for extra services from the manufacturer to optimise their investment throughout the lifecycle of the product.

With REGULAR, PREMIUM and EVOLUTION PACK, Socomec offers unique maintenance packages to take full advantage of the modular architecture of the UPS system: fast upgrading, cost predictability and no more “end-of-life criticality”.

**Evolution pack summary**

Evolution Pack delivers the most comprehensive service guarantee:
- 5-year, fully inclusive package,
- Permanent access to the latest technology,
- Periodic upgrades with complete module replacement,
- Continuous system care and monitoring based on specific usage conditions.

Evolve with Socomec:
- Control your costs: fixed price guaranteed over a 5-year period,
- Maximise your investment: incorporate cutting edge technology for the ultimate energy efficiency,
- Futureproof your system: eliminate end-of-life criticality.
New service features & key benefits

1 Remote monitoring LINK-UPS
   • Alarm notification to the nearest Socomec Service Centre.
   • Remote diagnostic and troubleshooting.
   • Periodic analysis reports.

2 Smart module management
   • Fast hot-swap replacement.
   • Load fully protected during maintenance.

3 Full power system upgrade
   • Periodic renewal, with complete module replacement using the latest technology.

Maximum operational uptime
Repair time guaranteed
Up-to-date technology... anytime!

Every data centre is unique with its own power requirements and site constraints. In addition, data centre managers are very aware of issues relating to resource optimisation. It is therefore essential that maintenance services are tailored to site conditions, ensuring the maximum level of protection and able to offer real control over maintenance costs.

PRISM Availability services is the maintenance package proposed by Socomec for ensuring Critical Business continuity 24/7 and protecting your investment.

Key points

- 5-year all inclusive package at a fixed price including all operational maintenance costs guaranteed with no extra charges

Benefits

- Personalised maintenance management and site improvement in line with specific data centre expectations
- Improved system uptime
- Total control over your maintenance costs for 5 years
Energy storage is the core element for the transition of the electric utility system to Smart Grids. The equipment availability is essential to optimise the massive integration of decentralised renewable energy, to reduce peak electricity consumption and to control the production-consumption-storage balance.

Socomec service packages are designed to keep your Smart Grid infrastructure operational and fully maintained to achieve the highest level of energy quality.

### Key points

- Regular inspection
- 24/7 Emergency service
- Technical expertise on-site within 4h*

### Benefits

- Improves system availability
- Avoids grid congestion
- Ensures energy balance profitability

* Please check the service coverage in your area.
Power availability is vital to ensure care continuity and avoid failures that could lead to critical situations for patients.

Your Socomec MEDSYS solution brings you a dedicated answer to guarantee the continuity of service in group 2 medical locations with the manufacturer’s guarantee.

Our Socomec experts also carry out:
- commissioning,
- training on the system,
- maintenance packages according to your operating constraints.

Your Socomec COSYS power factor correction system allows you to achieve significant cost savings on your energy bill, protects your equipment, and extends their operating lifetime.

Your electrical installation evolves. Environmental and operational changes, aging equipment, etc., are all factors that have an impact on your power consumption.

Within our maintenance contract, Socomec Experts take action for:

- preventive maintenance on your system,
- checking the correct sizing of your COSYS PFC,
- corrective intervention in case of system failure.

Because of the critical nature of many applications coupled with the rigorous demands of insurers and other bodies concerned with building safety, some organisations may benefit from the reassurance of a routine inspection of their transfer switches by the manufacturer.

The Inspection and Testing Visit for ATyS comprises an annual site visit by a qualified Socomec engineer, which certifies that each transfer switch is functioning correctly.

After each inspection and testing procedure the engineer will provide a detailed report and declaration of conformity.

**Key points**

- Manufacturer seal of approval
- Latest firmware updates
- Complete report including technical recommendations
- Declaration of conformity

**Benefits**

- Secures all critical points and puts them under control
- Reduces risk of potential undetected faults
- Avoids costly downtime and reduces risk of operating losses
UPS Rental

All-inclusive solution for immediate Critical Power needs

Key points

- UPS shipped in 4 hours
- Transport to customer site
- UPS commissioning
- Hot-line technical support
- Next working day repair service
- UPS decommissioning and removal
- Return transport

Benefits

- First choice: rapid identification of the optimum solution for your unique requirements
- Fast: express shipment within a 4-hour window
- Flexible: rental periods available upwards of just 1 week, with easy extension options
- Safe: manufacturer standards guarantee compliance and technical performance
- Cost effective: rental fees are tax deductible as operating expenses*

* According to local tax legislation.

For guaranteed high quality, uninterrupted electrical energy - where and when you need it most - Socomec UPS Rental is the ideal short-term critical power solution for rapid response deployment.

Immediate UPS availability: over 200 standard UPS across all power ranges (from 1 to 500kVA) are in-stock, ready to be fast-tracked to your site.

Flexible rental options: because every situation is unique, Socomec offers a flexible approach to rental periods, from just one week up to several months and beyond – with easy extension options.

All-Inclusive solution: as the industry experts, Socomec will take care of all aspects of the UPS shipping, commissioning and maintenance – right through to removal and return transportation - making deployment quick and easy.

SiTE 789 a OPTIMISATION MEASUREMENT AND ANALYSIS
CONSULTANCY, DEPLOYMENT AND TRAINING
PREVENTION AND SERVICE OPERATIONS
LINK-UPS is the new Socomec remote monitoring service designed to provide IT and Facility Managers with 24/7 support to ensure the ongoing performance, efficiency and safety of their critical infrastructure and avoid costly downtime.

LINK-UPS provides a permanent connection between the internal monitoring system of any Socomec installed UPS and the nearest Socomec Service Centre.

**Key points**
- Continuous monitoring of equipment's performance
- Automatic anomaly detection
- Proactive diagnostics
- Optimised troubleshooting

**Benefits**
- Prevents problems from occurring
- Reduces Mean Time to Repair
- Increases system availability
- Saves downtime costs
If an anomaly occurs in your UPS, the system will automatically notify the nearest Socomec Service Centre. A specialist Service Centre engineer will carry out a diagnostic check by remotely accessing the parameter dashboard and perform the most appropriate corrective action.

**LINK-UPS report**

LINK-UPS keeps you updated about the operating status of your UPS, providing you with regular reports and technical recommendations for improving the quality of your system.
Batteries are a key element of UPS systems. Their efficiency and availability are important for preventing load downtime, but at the same time batteries are the most vulnerable and failure-prone component of such systems.

Battery failures are mainly caused by the premature "end of life" of a few battery blocks. A corrupted battery block, if not detected early and not replaced, can accelerate ageing within the rest of the battery string, therefore jeopardizing the integrity of the system.

The level of predictability for failure detection on a battery block depends on the number of measurements, tests and analyses that are performed on every single block.

Main factors for the premature end-of-life of battery blocks:
- High temperatures
- Frequent number of cycles
- Discharge too deep
- Recharging with high voltage
- Lack of regular maintenance

**Key points**
- Impedance test, infrared inspection, temperature, voltage measurement block by block
- Faulty/weak block detection
- Back-up time measurement (optional)

**Benefits**
- Information on the battery’s state of health
- Estimation of the optimum time for battery replacement
- Optimisation of the battery’s useful working life
Battery Care is a brand new set of service packages aimed to upgrade the standard battery check service (at string level) during the UPS preventive maintenance visit.

The packages will ensure the integrity of your business continuity by performing the highest level of inspection on your battery blocks.

Features

The Battery Care offer is designed around 3 packages: IMP (IMPedance), TEMP (TEMPerature) and PRIME (the full package).

<table>

* during battery charge. ** by performing the end of discharge voltage test.
• included.
○ optional.

Depending on the package chosen (IMP, TEMP, PRIME), a set of accurate measurements, tests and analyses will be performed on each single block across all battery strings by Socomec trained engineers.

An in-depth report will provide information about:

- the health of each single battery string/block,
- the faulty blocks that need to be replaced,
- the real “back-up time” of the battery system (optional).

Do you know your real back-up time?

For various external factors, your real back-up time could be much less than the one declared by the battery manufacturer.

Thanks to a specific set of measurements and analyses, Socomec can provide you with the exact back-up time of your battery system.
Replacement of batteries
Ensuring the continued reliability of your battery system during its life-time

The majority of batteries used in UPS applications (VRLA - Valve Regulated Lead Acid) normally have a calendar life of 5-10 years, depending on the local operating conditions. The calendar life is the actual time span from the date of installation until the end of life, when battery capacity drops below 80% of its rating. VRLA batteries that are well maintained and installed in a properly conditioned environment, typically have a service life of 70% to 80% of their calendar life. This explains why the UPS back-up time could differ from the one declared by the battery manufacturer.

For the integrity of business continuity, it is essential to know the estimated end-of-life of the battery system and to be correctly advised concerning the best time for its replacement.

The expertise of the UPS manufacturer is the best guarantee for carrying out any battery replacement operations. An expert that understands your equipment and how it is integrated into your unique working environment and who can respond effectively to any anomaly should any occur.

### Key points

- Checking and recalibration of battery charger setting
- Fully secure battery discharge test
- Battery disposal according to local regulations

### Benefits

- Prevents unexpected early shutdown of the UPS
- Saves downtime costs
- Advice for the optimisation of the battery back-up time
Replacement of consumables
Ensuring the continued reliability of your Critical Power equipment during its lifetime

The components of each UPS system are designed to operate reliably during the product’s normal life cycle, in the electrical environments and environmental conditions stated in the installation and operating manual.

To reduce the impact of ageing on your system, which could affect the efficiency and availability of the installation, it is vital to carry out a periodic preventive replacement of parts subject to wear and tear such as fans and capacitors.

<table>
<thead>
<tr>
<th>Consumable part</th>
<th>Years</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fan</td>
<td>4</td>
</tr>
<tr>
<td>DC capacitor</td>
<td>5</td>
</tr>
<tr>
<td>AC capacitor</td>
<td>7</td>
</tr>
</tbody>
</table>

Fans and capacitors must be replaced by qualified personnel only. Only Socomec personnel are authorised to make recommendations for any replacement parts.

* based on operation of the unit within the manufacturer’s specification (refer to installation manual). Capacitor & Fan lifespan is subject to change if environmental conditions (premises, usage or load type) are abnormal or harsh for the equipment.

**When a replacement is recommended?**

**Benefits**

- Prevents UPS instability and malfunctions
- Avoids risk of system breakdown
- Saves downtime costs
Multibrand
A single partner for all your Critical Power installed base

Some critical power facilities operate with an installed base fragmented by various items of equipment made by different manufacturers.
That’s why it is increasingly important (and more efficient) to have all maintenance operations handled by a single reliable service provider.
For all your multibrand equipment Socomec can ensure the Service Level Agreement required, centralise maintenance scheduling and deploy emergency back-up services in case of urgency.

Key points

- Expertise & easy management of all maintenance planning
- A single point of contact for all sites and all eligible equipment
- Full audit of all equipment on site with consolidated report detailing recommended approach for maintenance

Benefits

- Optimises all maintenance planning
- Centralises the emergency technical call-out services
- Advice on site’s critical power issues and potential areas of risk/vulnerability
- Reduces operating costs
Power quality audit

Optimising the reliability, efficiency and safety of your high quality power supply

The Power Quality Audit (PQA), is a service offered by Socomec that checks the load level and the quality of the low voltage electrical installation.

The PQA uses network analysers, designed to detect faults and deteriorations and record parameters and information over a significant period that may be of use in locating the causes of electrical disturbance.

The data is collected and analysed by Socomec engineers, who can then diagnose the problems and suggest the most appropriate solutions. This may have a beneficial impact on the installation reliability and extend the equipment lifetime.

Key points

- Voltage variation
- Harmonic distortion
- Transient current
- Neutral and earth fault, EMC environment
- Unbalanced three-phase load
- Power factor correction

Benefits

- Detects recurring defects
- Identifies disjunctions and dysfunctions
- Anticipates deterioration of the installation
- Extends service life of equipment
- Improves system reliability
Socomec’s Thermal Imaging service involves checking the components of your electrical installation using special infrared equipment. Infrared cameras are used to detect and photograph infrared radiations produced by warm objects, thus enabling an object’s temperature to be analysed in a non-invasive way and with a high level of precision. In this way it is possible to perform a preventive diagnosis of breakdown risks by analysing the temperature of components including transformers, electrical switchboards, power factor correction systems, distribution cables, protection devices, isolators, UPS, converters, and batteries, etc.

**Key points**

- Complete check-up of your low voltage installation
- Wide range of components can be analysed
- Identification of malfunctions that would not be possible through simple visual inspection

**Benefits**

- Increased equipment availability and reliability
- Reduced downtime costs
- Optimised service lifetime of equipment
- Reliable estimation of expected remaining service life of consumables
- Increased MTBF (Mean Time Between Failures)
Socomec service experts can perform a complete ‘energy efficiency’ diagnosis of your electrical installation, and so identify the appropriate measurement points essential to achieving your goals. Once done Socomec teams will help you set up the measurement instrumentation and software and also provide you with all the support services necessary to maintain your system during its entire lifecycle.

Key points

- Audit of your energy efficiency needs
- Integration and checking of each measurement point
- Commissioning of the solution (hardware + software)
- Software customisation based on your requests
- Several levels of training modules (user training, advanced training, in-house and intercompany trainings)
- Maintenance and software upgrades

Benefits

- A secured installation of your energy efficiency solution
- The guarantee of a complete system (product + software) that is immediately operational
- An adapted solution based on your requirements
- A reliable installation to optimise your energy consumption
- Controlled and predictable cost savings
Reactive power compensation is an important element for reducing the electricity bill and improving the quality of the electrical network.

It is important to clearly define reactive power, where it comes from and its effects in electrical networks. Potentially any electrical load (transformer, motor, lighting, etc.) using alternating current brings into play two forms of energy: active power and reactive power.

Socomec experts are trained to perform the necessary procedures during the whole lifecycle of your electrical installation, from audit to dimensioning and commissioning of the equipment that will optimise reactive power compensation.

**Key points**

- Take into consideration the client environment
- Dimensioning of the compensation system
- Commissioning of the new equipment required

**Benefits**

- Improves system power factor
- Avoids penalty charges from utilities for excessive consumption of reactive power
- Improves voltage regulation in the network and equipment efficiency
- Increases power availability
An earth fault, caused by an insulation loss between a live conductor and an exposed conductive part may cause damage to the electrical installation and can pose a serious risk of electrical shocks.

For this reason Socomec has developed services upstream of IT insulation products to help customers benefit from our recognised experience in different business sectors: distribution networks, industries, medical IT load, etc.

Socomec provides you with support from audit through to commissioning and expertise of insulation monitoring (iSOM) equipment.

Key points
- Commissioning of your ISOM solution
- Training on insulated IT earthing networks
- Regular control of your insulation
- Insulation fault detection of your installation

Benefits
- Secured and reliable network
- Optimal continuity of service
- Manufacturer support during the entire lifecycle

* Service available only for France.
On-site metrology
Accurate calibration of your site metering equipment

The ISO 50001 standard stipulates that organisations must define and periodically review their measurement needs and ensure that the equipment used in monitoring and measurement of key characteristics provide data which are accurate, reliable and repeatable.

The aim of Socomec’s calibration control service is to identify the accuracy of the electrical measurements of the site metering equipment. Socomec therefore ensures that the collected data used by the customer is trustworthy.

Key points
- Environment analysis
- Measurement campaigns with metrological certified measure device
- Detailed customer report with recommendations
- Technical advices
- Curative actions
  - Cabling modifications
  - Measure point setting adapted to the customer environment
  - Network and communication check and testing
  - Measurement point replacement

Benefits
- Guarantee the precision of measurements
- Edit reports attesting the good installation and the effective operation of the equipments
- Full compliance with ISO 50001
- A unique service for all your measurement devices (Socomec and third-party equipments)
Online energy management services
A cloud-based solution for managing your energy performance

The N’VIEW cloud platform manages multi-fluid data collection and offers a wide range of features for monitoring measurements, analyzing energy consumption and managing costs. Socomec experts ensure the implementation of your online energy management system, including the commissioning of optional gateways in order to adapt it precisely to your installation.

Key points
➢ Remote software commissioning
➢ Support via digital platform available 24/7
➢ Training on demand
➢ Customisation of the application

Benefits
➢ Ensures perfect integration of your multi-fluids datas
➢ Adapts precisely N’view Dashboard to your needs
➢ Trains and supports users to master software features
Powerlease is a financing solution enabling you to implement your project immediately without any planned investment. Completely tailored to your requirements, it allows you to have a flexible and fully scalable installation that will maximise your return on investment.

You choose the products and the services you want - it is suitable for all new installations as well as for the replacement of your old equipment by higher-performance equipment.

**Key points**
- Combined products & services offer
- Controlled budget with fixed-term lease
- Contract period from 36 to 72 months*
- New equipment can be added or removed with simple contract amendment

**Benefits**
- Immediate implementation of your project
- No CAPEX investment
- Optimises your ROI
- Flexible and scalable solution
- Tailored to your requirements

* Other period on request.
Continuous improvement approach
Proactive advice for your system integrity over the years

Upon request every year our specialist engineers will draw up a complete report with the summary of all activities performed by our field service engineers, including an in-depth analysis of equipment performance and key recommendations for improvement. This will help you improve your maintenance process and so optimise your resources and costs during the entire lifecycle of your electrical installation.

Key points
- In-depth analysis of operating conditions and usage of your installation
- Dedicated report with a summary of all operations performed
- Periodic meetings with our experts
- Key recommendations for improvement

Benefits
- Optimisation of system and solutions based on environment conditions and operational constraints
- System reliability, efficiency and safety
- Resource and cost optimisation during the entire lifecycle
End-of-life management
Expert assistance to maximise the residual value of your assets

End of Life (EoL), in the context of manufacturing and product lifecycles, is the final stage of a product’s existence.

For product users, EoL also concerns the responsible disposal of the existing product, transitioning to a different product and ensuring that disruption will be minimal.

Socomec experts can manage all of these critical tasks in a secured and efficient way, from the diagnostic phase through to the eventual recycling phase.

Key points
- Technical & economic analysis
- Support for planning the safe removal and disposal of old products (including recycling of batteries) following the applicable environmental standards (e.g. ISO 14001, WEEE, etc.)

Benefits
- Certified eco-friendly processes for hardware disposal, refurbishment & recycling
- Cost optimisation
- One point of contact during the entire lifecycle
Having a product renewal process is essential in order to support sustainable growth and to avoid or anticipate operational disturbances while always benefiting from the latest technology. Socomec is on hand to accompany you in the evolution of your business and provide you with the best advice in order for your critical installation to benefit from a seamless transition or upgrade.

**Key points**

- Special price conditions
- Full consultancy and support on product refurbishment
- Risk-free procedures during the entire replacement operation

**Benefits**

- Reduced risk of downtime
- Cutting-edge technology, always
- Cost optimisation
Critical power projects can be challenging and may require dedicated personnel with the right level of experience and seniority to manage complexity in a quick, reliable and cost efficient way.

With its teams of highly skilled design engineers, Socomec offers its manufacturing expertise to provide a range of consultancy services to support customers to achieve their project objective. Site audit, analysis, design and implementation for reliable, safe and effective power facilities in order to fully guarantee the productivity of the customer’s business... anytime and anywhere.

Key points

- Audits of preliminary installations
- Functional analysis of your solution
- Recommendations for implementation
- On-site commissioning and tests
- Tracking system implemented in the first weeks of operation

Benefits

- All-in-one solution
- Single point of contact
- Manufacturer expertise
- Better time to market
The commissioning of a UPS or other Critical Power supply systems covers start-up of the equipment, verification of its functions according to its design specifications, and to ensure that it is compatible with the customer’s working environment.

Socomec performs the commissioning service within a quality process standard by ensuring that your equipment will be delivered in a safe, reliable and operational condition.

Key points

- Work environment inspection
- Electrical installation check (isolator switch, cabling, circuit breakers etc.)
- UPS internal and external check
- System power on and set up
- Operating test
- Load bank test (on request)

Benefits

- Commissioning performed with the best working standards
- Compatibility with your work environment
- Compliance with the various installation standards

Certificate of "Safe and Reliable Installation"

SOCOMEC (www.socomec.com) declares the system has been checked and certified for high quality and availability supply and reserves the right to limit the responsibility in case the start up and the maintenance is not performed by authorised personnel*. The present certificate should be renewed on yearly basis.

* Personnel is authorised only if trained by the manufacturer and enabled by a certificate released by the manufacturer. Only authorised personnel can insure competence, Original spare parts, global diagnostic through appropriate tools, Update of the unit according to new releases.
Technical training
Certified Manufacturer Training Program

Socomec specialists can help you gain the necessary skills to operate your equipment efficiently and so increase its availability.

Socomec technical training courses can take place either at your premises or in Socomec’s dedicated training centre.

Key points

- Hands-on training
- Either in Socomec factories or at customer’s site
- Open discussions and participants’ feedback
- Many types of configurations covered
- Real-case simulations based on customer’s actual installation
- Experienced ‘field-tested’ trainers

Benefits

- Autonomy to manage routine operations
- Alarm procedures
- Always up to date with latest technologies
