**Diris A10**

**Modular multi function meter**

**Function**

The Diris A10 is a multi function meter for measuring electrical values in low voltage networks in modular format. It allows all electrical parameters to be displayed and the measurement, energy metering and communication functions to be used. In addition, the Diris A10 has a function for correcting errors in CT connections. It also allows variations in temperature to be detected thanks to its internal temperature measurement function.

DIRIS A10 - Connection

Low voltage balanced network

Recommendation:
- For IT earthing systems, it is recommended that the CT secondary is not connected to earth.
- When disconnecting the DIRIS, the secondaries of each current transformer must be short-circuited.
- It is recommended that the earthing point for the DIRIS A10 and the current transformer secondaries should not be earthed at the same time.

3/4 wires with 1 CT

Low voltage unbalanced network

3/4 wires with 3 CTs

3 wires with 2 CTs

3 wires with 2 CTs

Use of 2 CTs reduces by 0.5% the accuracy of the phase, whose current is worked out by vector calculation.
