Socomec offers customisation and development of products to meet your every requirement. Contact your sales branch for more information.

Equipped enclosures and cabinets to suit all your applications

The **specialist** in load breaking, switching, protection, metering and measurement, SOCOMEC designs and produces **standard and tailored integrated solutions**.

With our dual expertise (in products and solutions) we can offer you the electrical equipment you need for your systems, all under a **manufacturer's guarantee**.

The **result of the long accumulation of extensive experience**, our **standard integrated solutions** bring you:

- **Fast implementation backed up** by a review of system limitations
 - **Ease-of-use, without any risk of non-compliance errors**
- Our solutions guarantee:
- **The safety and protection of people and goods**
 - **Continuity of use**
 - **Compliance with standards on products, assemblies and installations**

What you need to know!

SOCOMEK has an entire department at your service, dedicated to the design and production of specialist equipment.

This department is here to support you throughout your projects, including:

- Building specifications
- Budgets
- Planning
- Design and production
- Qualification and certification
- Support during installation and startup
- Training

Draw on our expertise and contact your local SOCOMEC branch.

PV enclosures

PV enclosures are designed to consolidate the many channels of photovoltaic modules, while protecting against overcurrents and overvoltages, to enable their connection to solar inverters. In their design (Class II), they provide a maximum level of security for users from external intervention.

With the SOCOMEC range of PV enclosures you have the solution and a manufacturer's guarantee for all your solar needs (solar fields, buildings and residential systems).

Solutions for medical premises

The availability of a reliable electrical power supply is vital to ensure continuity of care. There is no excuse today for power failures that can lead to life-or-death situations. Medical IT cabinets ensure the availability of electrical power in medical centres (in accordance with standard NFC 15-211).

The SOCOMEC medical IT cabinet range comes in three models and provides the solution for all your medical centre needs, with manufacturer's guarantee.

Equipped enclosures and cabinets to suit all your applications

Enclosed switches

Enclosed switches incorporate load-break switches with or without fuses, developed, qualified and certified for industrial electrical distribution and service sector networks.

They support the load-breaking, isolation and lockout of the mains power for all types of loads and can also be used as a general switch for equipment in various applications.

Safety enclosures

Safety enclosures are designed to be installed near a motor or a machine to **separate them from the power supply**. This includes manually operated, **padlockable load-break switches**, in the OFF position with a **visible and reliable display** of the switchgear's open position.

During preventive maintenance or inspection work, these enclosures ensure operator **safety** against **the accidental startup of electrical machines**.

For use in an explosive atmosphere (gas/dust), use our ATEX model to prevent any explosion during the unit's opening/closing phases, which generate electrical arcs.

Switching enclosures

Switching enclosures ensure the availability of electrical power in critical facilities (high-rises, public buildings, hospitals, IT or telecommunications centres, airports, industrial sites, etc.), operated manually or automatically to switch between a normal power source and a backup source (genset or auxiliary transformer) to cover in the event of failure. (Fig. 1)

For sites that require a power availability rate close to 100%, our

ATyS Bypass solution offers dual redundancy during normal operation, service and maintenance work. With its capacity to resume Normal/Bypass channels, the ATyS Bypass solution allows the continued, seamless and safe use of your systems.

In industry, our switches can provide:

- A lockout by the earthing connection (Fig. 2)
- Load redundancy (e.g. between motors) (Fig. 3)

Fig. 1

Fig. 2

Fig. 3

Enclosed switches

Enclosed load break switches and fuse combination load break switches

Switchgear systems are an essential part of your electrical system. Installed at every level of the distribution, they allow you to secure and isolate parts of the network or electrical equipment.

SOCOMEK load break switches in power distribution and machine control applications

The solution for

- > Processing industry
- > Infrastructure
- > OEM

The advantages

- > Increased flexibility
- > Maintenance safety
- > Adaptable to every environment

A manufacturer's expertise

- > Active in the electrical switchgear market since 1922, Socomec is both a global leader and an undisputed benchmark reference.
- > Our enclosed solutions, with or without fuse protection, are suitable for a wide variety of commercial and industrial power distribution operating environments and applications. From 20 to 1600 A, to IEC or UL standards, we now have one of the widest ranges on the market.

Business sectors

Processing industry

- Cement plant - Quarries
- Steel plant
- Food processing industries

OEM

- HVAC - heating, ventilation and air-conditioning
- Lifting

Infrastructure

- Airports - Tunnels - Motorways
- Water treatment

Steel plant		++	+++	
Food processing	+	++		+++
Tunnels	+	++	+++	
Water treatment	++	+++		
HVAC	+++	++		
Lifting	+	++	+++	

The benefits of our range

Enclosed switches equipped with Socomec load break switches or fuse combination load break switches provide emergency breaking, breaking for mechanical maintenance, local safety isolation and fuse protection for any low voltage circuit.

Increased flexibility for more productivity

Controlling the power as close as possible to consumers makes operation and maintenance easy, autonomous and safe. This allows you to optimise the equipment's operating times.

Maintenance safety

Breaking close to the load means the system can reliably identify which circuits need to be disconnected. On-load breaking and isolating, as well as the clear indication of the load break switch's position and the triple lock of the control lever (in the open position) allows non-electricians to reliably and easily shutdown and isolate a supply circuit. The locking of access (live or non current-carrying) to the enclosure's internal equipment can be managed to suit all kinds of safety procedures.

A solution to suit any environment

Available in 4 materials, the Socomec enclosed switch range can withstand most environmental constraints; protection against water and dust (IP), mechanical impact (IK) or corrosion.

The solution for

- > OEM
- > Industries
- > Commercial buildings
- > Electrical distribution

Strong points

- > Safe operation
- > Suitable for all kinds of environment
- > Easy setup
- > Extensive range

Compliance with standards

- > IEC 60947-3
- > IEC 60364
- > EN 60947-3
- > EN 61439
- > EN 60204-1

Other products

- > Customised solutions available on request.

Function

Enclosed load break switches ensure the on-load breaking and making of circuits and safely isolate all low-voltage electrical circuits by providing protection against contact with live parts and environmental elements, such as dust, water and other hazards.

They enable the shutdown and isolation of the power supply as close to the equipment as possible.

Advantages

Safe operation

- Secures transfer for mechanical or electrical work.
- On-load breaking.
- Ergonomic control lever, available in red/ yellow or black.
- Triple lock in OFF position.

Suitable for all kinds of environment

- Insulating enclosure for chemical and food processing applications, indoor or outdoor installation.
- Painted steel enclosure for areas at risk of mechanical impact.
- Stainless enclosure for food processing and pharmaceutical applications.

Easy setup

- Cable access top and/or bottom.
- Pre-drilled cable glands (up to 125 A).
- Removable steel cable glands, top and bottom (> 125 A), aluminium coated (> 630 A).
- Plenty of room for cabling.

Extensive range

- Standard range
- Customised on request.

Load break switch in isolating enclosure

■ **COMO** in polycarbonate enclosure

General characteristics

- From 20 to 125 A.
- 3, 4, 6, 8 poles.
- Yellow/red or grey/blue lever.
- Triple lock in OFF position.
- Polycarbonate enclosure.
- Screw-on front.
- Colour: RAL 7035.
- Degree of protection: IP65.
- Pre-drilled cable-in holes at top and bottom.

Accessories

- Unswitched neutral pole optional extra (max. 1).
- NO+NC or 2 O auxiliary contact.

The solution for

- > OEM
- > Industries
- > Commercial buildings
- > Electrical distribution

Strong points

- > Safe operation
- > Suitable for all kinds of environment
- > Easy setup
- > Extensive range

Compliance with standards

- > IEC 60947-3
- > IEC 60364
- > EN 60947-3
- > EN 61439
- > EN 60204-1

Other products

- > Customised solutions available on request.

Function

Enclosed fuse combination load break switches ensure on-load breaking and making of circuits, protect against overcurrents, and safely isolate all low-voltage electrical circuits by providing protection against contact with live parts and environmental elements, such as dust, water and other hazards.

They enable the shutdown and isolation of the power supply as close to the equipment as possible.

Advantages

Safe operation

- Secures transfer for mechanical or electrical work.
- On-load breaking.
- Ergonomic control lever, available in red/yellow or black.
- Triple lock in OFF position.

Suitable for all kinds of environment

- Insulating enclosure for chemical and food processing applications, indoor or outdoor installation.
- Painted steel for areas at risk of impact.

Easy setup

- Cable access top and/or bottom.
- Pre-drilled cable glands (up to 100 A).
- Removable steel cable glands, top and bottom (> 100 A), aluminium coated (> 630 A).
- Plenty of room for cabling.

Extensive range

- Standard range.
- Customised products on request.

Fuse combination load break switch in isolating enclosure

FUSERBLOC in polyester enclosure

General characteristics

- From 50 to 160 A.
- 3 poles, 4 poles.
- DIN fuse protection (For BS, please contact us).
- Black lever (yellow/red on request).
- Triple lock in OFF position.
- Polyester enclosure.
- Screw-on front.
- Colour: RAL 7035.
- Degree of protection: IP55.
- Wall-mounted, 4 brackets included.

Accessories

- Aux contact NO and NC.
- Blown fuse NO/NC auxiliary contact.
- Terminal shroud.

FUSERBLOC in metallic enclosure

General characteristics

- From 32 to 800 A.
- 3 poles + solid neutral, 4 poles.
- DIN fuse protection (For BS, please contact us).
- Black lever (yellow/red on request)
- Triple lock in OFF position.
- Painted steel enclosure.
- Door latch system.
- Colour: RAL 7035.
- Pre-drilled cable-in holes at top and bottom.

- Degree of protection: IP65.
- Wall-mounted, 4 brackets included (not available for 32 and 63 A.)

Accessories

- Aux contact NO and NC.
- Blown fuse NO/NC auxiliary contact.
- Terminal shroud.

Enclosed transfer switches

The changeover switch market **sets high standards in terms of security and quality.**

Changeover switches are essential safety devices to ensure the continuity of the power supply in critical installations (high-rise buildings, healthcare buildings, data centres, banks, etc.).

With its expertise in switching technology, SOCOMEC can optimise your electrical systems and **ensure the continuity of your power supply.**

To ensure maximum operational safety, all of SOCOMEC's enclosed changeover

enclosures conform to standards IEC 60947-3/IEC 60947-6-1 and IEC 61439 switchboard standards.

From the small 25 A manual changeover switch enclosure to the 3200 A ATyS bypass cabinet, SOCOMEC offers a complete range to suit your every need.

Glossary according to IEC 60947-6-1

Definitions:

- MTSE (Manual Transfer Switch Equipment) is manually operated mains changeover equipment.
- RTSE (Remote Transfer Switch Equipment) is remotely operated mains changeover equipment.
- ATSE (Automatic Transfer Switch Equipment) is automatically operated mains changeover equipment.

The entire range of SOCOMEC changeover switches is rated PC-class.

A few types of application

SITE 493 A

SITE 493 A

SITE 493 A

Changeover switching

A manual or automated switching solution between two transformer or genset sources (Fig. 1).

Fig. 1

Earth connection

Earthing of equipment such as motors and electrical lines while securely isolating at their point of supply (Fig. 2).

Fig. 2

Load changeover

Switching the power supply from one load to another to ensure redundancy and balancing out the operating time of the two loads (Fig. 3).

Fig. 3

Phase reversal on motors

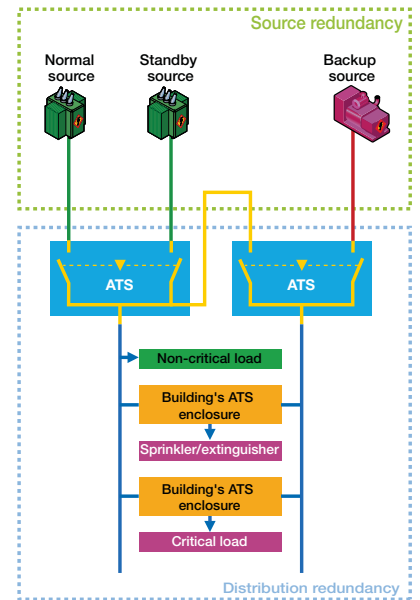

Changing the order of the phases powering a motor with the aim of changing its direction of rotation (fig. 4).

Fig. 4

HRB (High-rise Building) application

- Transfer switches are today subject to the official regulations on high-rise buildings and skyscrapers to guarantee a continuity in the power supply, e.g for:
 - Sprinklers
 - Goods lifts/lifts
 - Smoke extraction devices
 - Security lighting
- According to article R122-2 of the French Code of Design and Housing, residential high-rise buildings are those taller than 50 m and those used for all other purposes are taller than 28 m (e.g. hotels, offices).
- The category of high-rise buildings covers those in which the top floor is located at a height greater than 200 m.

atys_3605_a_1_gb_cat.eps

ATyS Bypass

- The ATyS Bypass is the ultimate solution for ensuring the complete availability of power for critical loads (nozzles, lifts, pumps, etc.) in vulnerable buildings (high-rise buildings, data centres, healthcare centres, etc.).
- The ATyS Bypass allows you to completely isolate the changeover switch to perform inspections and safely carry out periodic tests without interrupting the power supply.

The solution for

- > Securing the electrical supply for moderately sensitive applications

Strong points

- > Safe operation
- > Suitable for all kinds of environment
- > Easy setup
- > Extensive range

Compliance with standards

- > IEC 60947-6, -1
- > IEC 60364
- > IEC 61439
- > EN 60204-1

Function

Enclosed changeover switches ensure the on-load changeover of circuits and safely isolate all low-voltage electrical circuits by providing protection against contact with live parts and environmental elements such as dust, water and other hazards.

They safely switch sources or loads and enable the shutdown and isolation of the power supply as close to the equipment as possible.

Advantages

Safe operation

- Proximity disconnection.
- Ergonomic control lever.
- Triple lock system.

Suitable for all kinds of environments

- Isolating for chemical environments and outdoor areas.
- Painted steel for impact protection.
- Stainless steel for food processing and pharmaceutical applications.

Easy setup

- Room for cabling.
- Pre-drilled cable-in holes.

Extensive range

- Standard range.
- Products suitable for any use.
- Red-yellow, black lever.

Manual transfer enclosed switches

Enclosed **COMO CS**, **SIRCOVER**, **SIRCO M**

25 to 1600 A

SIRCOVER in polyester enclosure

coff_563_a_front.eps

General characteristics

- From 160 to 630 A.
- 3 poles, 4 poles.
- Switch with transfer when OFF (I-O-II), other options on request
- Black lever.
- Triple lock in OFF position.
- Polyester enclosure.
- Door latch system.
- Colour: RAL 7035.
- IP rating:
IP54 < 400A; IP65 ≥ 400A.
- Wall-mounted, 4 brackets included.
- Bridging bars (order separately).
- NO/NC auxiliary contact (order separately).
- Terminal screen (order separately).

SIRCO M changeover switch in steel enclosure

General characteristics

- 32 to 100A.
- 3 poles + solid neutral , 4th switched pole optional extra (max. 1).
- Black lever
- Triple lock in OFF position.
- Painted steel enclosure.
- Door latch system.
- Fixed via 4 holes at the base of the enclosure.
- Colour: RAL 7035.
- Pre-drilled cable-in holes at top and bottom.
- Degree of protection: IP65.
- Aux contact NO+NC or 2 NC (max. 1 per source) (order separately).
- Terminal shroud (order separately).

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

The solution for

- > High-rise buildings
- > Data centers
- > Energy generation
- > Healthcare buildings
- > Banks and insurance companies
- > Transport (airports, tunnels, etc.)

Strong points

- > Quick installation
- > Wide choice
- > Easy maintenance
- > Adaptability

Compliance with standards

- > IEC 60947-3
- > IEC 60947-6,-1
- > IEC 61439-2

Function

Our **transfer enclosures** are equipped with ATyS motorised and automatic changeover switches to ensure power availability in critical applications. Motorised transfer enclosures are controlled manually or remotely through an external automated system. Automated transfer enclosures automatically ensure that power availability is integrally managed.

Advantages

Quick installation

Easy installation with the network auto-configuration feature. All of the auxiliary contacts, inputs and outputs are routed on terminal strips for high rating ATyS models.

Wide choice

ATyS models have specific functions to make your electrical system safer and smarter. Compatible with all types of BMS/SCADA of your choice. Always know what is happening on your network.

Easy maintenance

ATyS models have maintenance-free arcing contacts. You can also control the device with the emergency lever behind the door.

Adaptability

With a wide range of setup options, our range of enclosed ATyS models are adapted to suit your needs.

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

ATyS M in polycarbonate enclosure

General features

- From 40 to 160 A.
- Mains 230 VAC [176 VAC-288 VAC] 50 Hz or 60 Hz [45 Hz-65 Hz].
- Bridging bar built-in.
- Mounted auxiliary contact.
- IP rating: IP 41.
- Colour: RAL 7035.
- Fixed at the base of the enclosure.
- Cover closed with 4 screws.

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

ATyS M in polycarbonate enclosure

General features

- From 40 to 160 A.
- 230 VAC [176 VAC-288 VAC] 50 Hz network or 60 Hz [45 Hz-65 Hz]
- Degree of protection: IP 55, IK08.
- Colour: RAL 7035.
- Material: transparent cover, enclosure base: polycarbonate.
- Mounting: 4 holes on the rear of the enclosure.
- Flame resistant to 650°C.

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

ATyS M in steel enclosure

General features

- Suitable for environments subject to mechanical risk and dust hazards.
- Bridging bar built-in.
- IP rating: IP3x or IP54.
- Colour: RAL 7035.
- Plates > cables: upstream and downstream.
- Material: 1.2 mm-thick steel.
- Coating: epoxy polyester powder.
- Mounting: 4 wall mounting brackets - not mounted.
- Door: hinged, cutout 327.4x47.6 mm.
- Door lock: 3 mm double bar key (included).

ATyS S in steel enclosure

General features

- ATyS S and ATyS d S, 40 to 125 A.
- Protection degree IP3X (IP54 optional extra).
- Colour: RAL 7035, epoxy polyester powder.
- Mounting: 4 wall-mounting brackets (not fitted).
- Material: XC steel, thickness 1.2 mm.
- Closing plate: top and bottom.
- Connection of cables: top or bottom.
- Locking device: 3 mm double bar (key included)
- Mains 230/400 VAC, 50/60 Hz \pm 30%.
- Two power supply versions: 12 VDC (ATyS S) and 2 x 230 VAC (ATyS d S).
- Manual emergency operating handle provided with the enclosure.
- Connection kit.
- Position and live voltage LEDs (factory-fit option).
- Priority source and mode selection (factory-fit option - for use with ATyS C30 option).
- Kit for three-phase networks without neutral (factory-fit option).
- Battery charger kit (factory-fit option).

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

ATyS in steel enclosure

General features

- ATyS r, ATyS g and ATyS p, 200 to 3200 A.
- Suitable for environments subject to mechanical risk and dust hazards.
- IP rating: IP54.
- Colour: RAL 7035.
- Closing plates: bottom.
- Cabling: top or bottom from 200A to 250 A, bottom from 400 to 3200 A.
- 2nd aux contact mounted on the ATyS.
- ATyS g model equipped with an ATyS D10 and ATyS p equipped with an ATyS D20.
- Inputs, outputs and auxiliary contacts mounted on terminals.
- Material: XC steel, thickness 2 mm.
- Coating: epoxy powder.
- Mount: Wall-mounted, supplied brackets not fixed (rating ≤ 400 A), floor-mounted on feet (rating > 400 A).
- Door: solid with hinges.
- Door lock with 3 mm double bar key included.

Motorised and automatic transfer enclosed switches

ATyS in enclosure

40 to 3200 A

Choose your equipment

Order the right part number

Mounting option

- This option determines the type of mount and the position of the ATyS in the enclosure or cabinet.

Connection option

- This option determines the type of cable connections on your device.

Display option

- This option determines the type of display available at the front of the enclosure. Option compatible only when enclosure is base-mounted.

Option to have the output on the terminal block

- This option determines the connection type for inputs/outputs and auxiliaries on wiring terminals.

Other options

- With this option you can add extra features such as surge protection and/or a genset battery charger.

Measurement option

- This option determines the load current measurement. Option only available on ATyS p.

Delivered equipped and adapted to your needs

- > Socomec can help you decide on the best configuration for your needs.

Transfer enclosed switches

ATyS Bypass

40 to 3200 A

tablo_036_a_1_cat

tablo_035_a_1_cat

Function

- Automatically switches between 2 sources to ensure continuity of the supply to critical loads such as sprinklers, lifts, water pumps, etc.
- Assures continuity of service during service work, maintenance and testing.
- Full isolation of the automatic switch for safe maintenance work.
- By connecting an **ATyS** to a remote **D20** interface, you can configure, operate and view the measurements at the front of

the equipment (timer settings, thresholds and hysteresis, start/stop of the genset, etc.)

General features

- 40 to 3200 A, 4-pole.
- Mains 230/400 VAC $\pm 20\%$, 50/60 Hz, auto supply from sources.
- Normal/backup control logic.
- Voltage and frequency control of networks I and II.
- Phase rotation control.
- 1 configurable bi-stable output relay for genset start/stop command.
- Control positions I, 0, II with dry contact.
- Manual emergency control.
- Auxiliary contacts.
- JBus/Modbus communication (as standard).
- Auto/Man switch.
- Equipment IP code: IP41 as standard and other IP codes on request.
- Hinged door.
- Retaining brackets (wall mounting) up to 160 A.
- Extension feet from 250 to 3200 A.
- Removable ATyS from 160 A
- Bar identification.
- Mimic panel (3 LEDs for live voltage on source 1, source 2, and load; optional 16-LED mimic panel).
- Built-in protection against direct contact from each functional unit.
- Steel enclosure.
- Colour: RAL 7035.

* ATSE: Automatic Transfer Switching Equipment.

The solution for

- > Data centers
- > Energy generation
- > Healthcare buildings
- > High-rise building
- > Banks and insurance companies
- > Transport

Strong points

- > No load breaks when switching to bypass mode
- > Certified solution
- > A wide range of accessories available

Compliance with standards

- > IEC 61439-2
- > IEC 60947-6,-1
- > IEC 60947-3
- > BS 60947-6-1

Expert Services

Technical site audit, solution specification, advice, commissioning, maintenance, training, etc.

Our Expert Services extend to a complete offer of customised services to make your project a success.

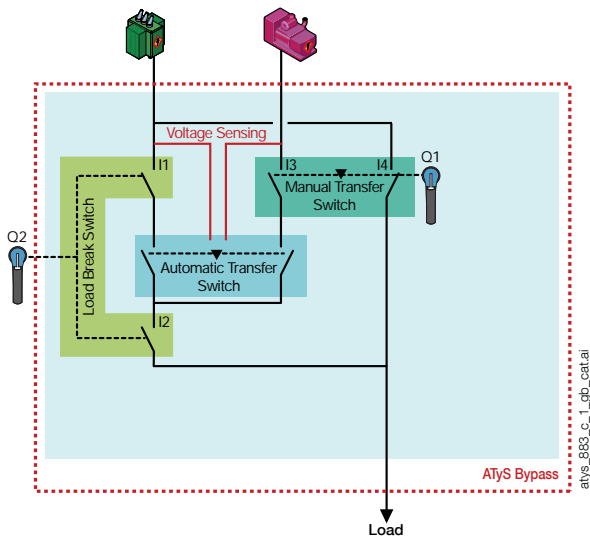

2 model versions

ATyS Bypass Single Line

- This consists of 2 components: an automatic changeover switch and a single shunting branch (bypass) connected to the priority source.

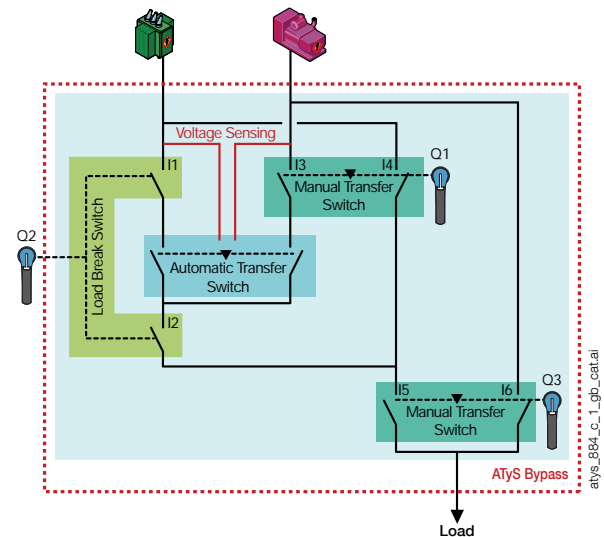

ATyS Bypass - SINGLE LINE

ATyS Bypass Double Line

- This consists of 2 functions: an automatic changeover switch and 2 bypass branches so the available source can be selected during the bypass periods if there is a mains outage.

ATyS Bypass - DOUBLE LINE

Functions

Normal position:

- The load is supplied by the source defined on the ATyS as primary. In the event that there is an outage on this source, the ATyS automatically switches to the backup source as soon as it becomes available.

Bypass position:

- The ATyS switches to bypass mode first by creating a bypass branch via Q1 to maintain the power supply of the load without any interruptions, and then by opening the load break switch Q2. This ensures the complete isolation from all power sources and allows operators to work safely on the system.

Test position:

- From the bypass position, just turn off the Q2 switch to resupply the ATyS and run tests without disturbing the power supply, before returning to the normal position.

Extension enclosure

Use

From 1250 to 3200 A, the standard enclosed ATyS Bypass solution can connect the sources from below and connect the load from below or above.

To make it easier to connect, you can opt for an extension enclosure featuring every type of connection (LL/HH/HL/LH).
